

Providence Regional Medical Center

Everett, Washington, USA

General Contractor
HOFFMAN CONSTRUCTION

Masonry Contractor
**FAIRWEATHER MASONRY
OF SEATTLE**

Products
CONCENTRATE, MEGAMIX I

Project Type
**GENERAL CONSTRUCTION -
FOUNDATION**

Concrete block foundation wall was leaking badly. Because of adjacent building it was impossible to excavate exterior and install positive side drainage. Therefore, a negative side system was chosen by Hoffman Construction who were the general contractor for the construction. Hoffman Construction selected the masonry contractor, Fairweather Masonry of Seattle, who had erected the foundation system. Because of the variable

nature of block density and the extensive amount of water seepage, a system consisting of one coat of Xypex **Concentrate** and a second coat of Xypex **Megamix I** was selected. A Xypex Technical Services Representative was onsite to assist with the initial phases of the application.
